

Segås Solar Park

Segås Solar Park is located in Hallsberg Municipality, approximately 9 km east of Kumla and 20 km south of Örebro, west of Highway 51. The park will be built on former agricultural land covering around 25 hectares.

The facility will consist of approximately 32,000 solar panels, with an estimated installed capacity of around 22 MWp. Annual production is expected to reach about 21 GWh, equivalent to the annual electricity consumption of more than 1,000 standard single-family homes with direct electric heating.*

The current focus is on procurement and preparations for construction, completion of the grid connection, and planning measures to support biodiversity. Construction is scheduled to start in late autumn 2025, and the park is expected to be completed and supplying electricity to the grid by 2027.

Uniper, together with Solgrid AB, is developing Segås Solar Park up to the construction phase. Thereafter, Uniper will be responsible for construction and operations. The park is located in Electricity Price Area 3 and will provide an important contribution to electricity production.
